UX / PRODUCT DESIGNER

Bilingual (English & French)

UX/Product Designer who ships — from research through to a working build. Six years taking interfaces from low-fidelity flows to shipped, in-engine implementation, with a background in visual/concept design that sharpens how I communicate ideas fast. Comfortable owning a design end-to-end: research, IA, prototyping, design systems, and hands-on build in Unreal Engine 5 and Figma.

EXPERIENCE

Little Guy Games — Lead UI/UX Designer

Nov 2021 – Aug 2025

Products: Home Run Derby VR (Meta Quest), Wings of Wanitu

- Owned end-to-end UX architecture, user flows, and interface layouts across two shipped products, from low- and high-fidelity prototypes through to final in-engine implementation.
- Built and maintained a modular UI component/design system used across multiple products, keeping visual and interaction patterns consistent at scale.
- Applied accessibility and inclusive design practices — adaptive layouts and clear feedback systems — to support users of varying skill levels and needs.
- Directly implemented UI in Unreal Engine 5 (UMG): asset pipelines, texture atlasing, and performance-conscious builds; used Git/GitHub for version control across cross-disciplinary teams.
- Used AI-assisted workflows (Claude + MCP) to speed up prototyping in Figma and implementation in-engine — a productivity accelerator, not a substitute for design judgment.

Telus Digital — UI/UX Designer

Jan 2019 – Apr 2019

- Designed high-fidelity mockups and interactive prototypes for digital ecosystems, with a focus on scalable information architecture.
- Created and maintained a UI component library and design system to keep touchpoints visually consistent across the product.
- Applied accessibility standards to keep interfaces usable across diverse user needs and assistive technologies.

Cosmic Games Studio — Lead Concept Artist

Oct 2019 – Nov 2020

- Led visual development for a sci-fi title's world and characters, taking work from thumbnail through production-ready, hand-off-ready deliverables for 3D and technical art teams — the same thumbnail-to-spec discipline now applied to interface and flow design.

SKILLS

UX: Information architecture, user flows & navigation design, wireframing, low/high-fidelity prototyping, user research & usability testing, empathy mapping, accessibility & inclusive design.

UI & Systems: Design systems & component libraries, interaction & feedback design, HUD/interface design, hands-on engine implementation.

Software: Figma, Unreal Engine 5 (UMG), Photoshop, GitHub, Claude Code / AI-assisted design-to-build workflows.

EDUCATION & CERTIFICATIONS

Bachelor of Design in Illustration — OCAD University, 2015–2020

User Experience in Game Design & User Interface in Game Design — Epic Games / Coursera, May 2026

PORTFOLIO

In-depth case studies — including an AI-assisted creative tooling pipeline, agent-trust interaction design, and a clinical documentation UX project — at guillaumedesign.ca.
